

# **The Africa Society for Blood Transfusion**

## **Specialist - IT Infrastructure**

The Africa Society for Blood Transfusion is seeking an IT specialist to conduct an important project. The engagement will take the form of a short term contract and is estimated to take 25 days over a 4-6 month period in 2 or 3 trips.

We are looking for an individual with good IT infrastructure knowledge to offer technical advice on a project aimed at expanding the existing computer infrastructure operated in country, and to make the data that is presently captured using Hemosoft e-Delphyn blood banking software available to all BTS Centres in the country.

The IT Specialist will have following key responsibilities:

- To provide technical expertise on the development and implementation of a central repository for data generated at the seven Zonal Centres, as well as existing satellite sites. The seven Zonal Centres will be linked to headquarters as well as to each other, thus making the data accessible to all.
- To work with the BTS IT team in the implementation of the data repository and to train staff on appropriate management and maintenance of the system, including basic trouble shooting and remediation.
- To advise the BTS on the possibilities of IT linkages with hospital transfusion patient information systems.

### **Knowledge, skills and experience required:**

- 3-5 years' experience in managing and delivering IT infrastructure projects
- Good overall knowledge and understanding of IT infrastructure
- Good command of English - written and spoken
- Knowledge of e-Delphyn blood bank software will be an advantage.

### **Application:**

Expressions of interest, together with a short (one page) CV should be submitted by email to the AfSBT Administration Officer on email address [info@afsb.org](mailto:info@afsb.org), on or before close of business on 9 September 2016
